NiKec DOCSTORE

Access your files wherever you are	Store and share documents securely	Keep sensitive content under control

A secure file sharing solution for efficient organizations

- *Access your files whenever you need to, however you wish, and from anywhere*
- *Back-up your important documents in an environment that you fully control*
- *Avoid multiple copies and versions of documents while accessing them from your computer, laptop or iPad*
- *Support team-work in your organisation, with partners or with customers by easily sharing files or folders with authorized persons*
- *Reduce traffic load on your e-mail and FTP servers and do not depend on the reliability of a USB key or a CD Rom when transferring files*

Another original application from   **sai** systems auditing   More information: www.sai.ca

## Access and share your files in full simplicity

- A URL link is all it takes to access the file directly
- When you need to work offline, download the file in advance and edit it at your convenience. When connection is re-established, Nikec DocStore will synchronise the different versions automatically
- Sharing is based on authorizations provided by the file owner themself, to selected persons. It is possible to share unique files or complete folders

Bring your files with you

- Access Nikec DocStore from your iPad, your laptop, or your desktop.
  A simple Internet connection is required

Simplify document sharing

- Reduce file transfer load on your file sharing servers while using an environment that is easy to use, convenient, transparent for the administrator and secure
- Keep control on access authorization management while providing more flexibility to all users

Cloud or on premise? Your choice

- External hosting (cloud) reduces cost for storage and management (security, maintenance...)
- On premise setup ensures you have total control of the system and that it is compliant with your internal policies

In terms of application features, it is exactly the same!

Security and transparency: you know where your files are stored

Whichever hosting configuration you choose, we offer complete transparency on the "physical" storage location of your files. That way, you always know where they are located and under which legal constraints the infrastructure is.

Reduce your IT costs and preserve documents integrity

- Available space can be re-evaluated at any time and upgraded in minutes
- Each access, transfer and share of document is recorded. They are made through encrypted channels (SSL)
- Files are hosted behind a double firewall in a tier III level datacentre
- All documents are backed up on a daily basis, with version history over one month
